

I decided to make a pet shop website offering a seamless shopping experience for premium pet foods, toys, and all essential accessories. I plan to let users navigate a user-friendly interface that perfectly blends style and functionality. The name I've chosen for the website is "Gabbu's Pet Shop."

Here's a detailed breakdown of my website's structure and content:

1. Home Page:
 - Introductory Message: A warm and inviting welcome message for shoppers, setting the tone for a positive shopping experience.
 - Featured Products Section: Highlighting select products to capture the attention of visitors and encourage exploration.
 - Exclusive Product Preview: Showcasing a unique and exclusive product to generate interest and excitement among users. (Will use a product from the internet)
2. A page for its online store:
 - Add to Cart Function: Implementing a user-friendly cart system to facilitate easy and efficient online shopping.
3. A page for what the page is all about containing. (All will be fake)
 - Our Story: Creating a fictional narrative that adds a personal touch, making the website more relatable to users.
 - Mission: Outlining a mission statement that reflects the values and goals of Gabbu's Pet Shop.
 - What sets us apart: Highlighting unique aspects of the pet shop that distinguish it from competitors.
 - Connect with us.
4. A footer with my contact details like.
 - Facebook
 - Phone no.
 - Email

I will use what I learned from w3school as my sole guide for this project, ensuring a well-structured and visually appealing website.
